

Introducing

Gadel X Helmet

“The invention created to help you survive a calamity.”

TARGET MARKET:

- Military and First Responders (Red)
- Consumers (Green)

FEATURES:

- Camera.
- Oxygen tank
- Oxygen purifier.
- Head counter.
- LED Light Identifier.

PATENT INFORMATION:

Patent pending.

SUMMARY:

Imagine a helmet whose primary goal is to protect a person from dying from smoke from a fire, radiation from a nuclear explosion, and bioweapons such as a man-made virus. The Gadel X is the helmet that you would need in this dangerous world. Once the person wears it, it will form a protective barrier that will help the user walk through hazardous areas and into a safer place.

Powered by 8 lithium re-chargeable batteries that are charged for up to 6 hours using USB ports, the Gadel X helmet is armed with all the necessary components to help the user survive dangerous circumstances. Essential components, such as an internal oxygen tank with an oxygen level sensor built into

the helmet, allow normal breathing in a zero-oxygen atmosphere. While working hand in hand with the oxygen tank is the oxygen purifier, which converts carbon dioxide to oxygen, thus sending it back to the oxygen tank when needed. In addition to the life support system, the Gadel X helmet's electronic unit is revolutionary with its HUD screen, allowing the user to see virtual navigation to visualize an escape route, in-visor tele-video conference, and full-on surround sound capabilities for added situational awareness. For further adeptness, it has Bluetooth and GPS integration via the user's phone, which provides the head counter capability that allows first responders to geolocate the user of the Gadel X helmet in correlation with their location on the map.

Like the proverbial saying, “Necessity is the mother of invention,” the Gadel X helmet is an invention created to survive a calamity, such as a fire, a nuclear incident, or pandemics. It's an innovative invention that has market potential in the military, first responders, and consumer categories.

About the Developer

Rony Joseph from Philadelphia, PA, was concerned about the dangers of smoke inhalation from fires, radiation exposures and threats from viruses that is why he created the Gadel X Helmet. Rony contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that he may see success with this great idea and turn it into a real product. He is actively seeking a company that would have an interest in licensing the product for royalty. Working with Mars Rising Network, this essential new design concept was refined and prepared to be presented as a commercial product.
